

EEC aid

ICN 29/7/59

The EEC decided to accord a loan of five million Ecus to Mozambique for a development project in the Cabo Delgado region. The project aims to popularise agriculture and develop a commercial structure by providing vehicles and improving stockage capacities for food crops. Also included are rural road repairs and maintenance, and renewal of freezing equipment for processing and stockage of fish. In the second phase, the project aims to improve the exploitation of sea waters, to aid small and medium sized industries as well as to improve hygiene and to supply drinking water to the town.
